About This Game

Welcome to Cross Country Skiing VR!

Your task is to finish before your opponent in a virtual, cross country skiing race. But watch out! You're ski poles are very short so squat down and really get moving with your arms to get a head start and cross the finish line first. You choose if you want to face off your opponent in a 500 or a 1 000 meter track. Get your heart rate going in the snowy, virtual forest tracks!

This version of Cross Country Skiing VR is a first release created to explore how VR can be used to motivate and promote physical activity. It's a short and straight forward race of cross country skiing ideal to be a part of e.g. a workout warm up.

Please share any feedback for future development.

Thank you for playing!

Title: Cross Country Skiing VR
Genre: Racing, Sports
Developer:
Levrage
Publisher:
Levrage
Release Date: 12 Apr, 2018

cross country skiing vr

Did you look at the minimum system requirements for this? There is no way that is right. I bought this to see what a GTX 1060 could do, but I feel like I've been duped. This isn't worth \$1.

UPDATE: It looks like the requirements were changed and it's free now? Well, that's better, but I still wouldn't spend actual time on it. Except maybe writing a review.... Fun game! Short and sweet though - hopefully there will be more from the developer!. I really wanted to like this game but there are too many faults right now

- 1) the squatting at the poles doesnt let you see much
- 2) you can literally fun past the end of the track - bad
- 3) there seems to be no way to reset the game - the cotrollers dont function
- 4) there is just too little game for the price point - 2 distances no turning
